The buildings approximately 10 meters high, and had. They were surrounded by scaffolding 1955, the buildings had gray tile roofs	,
(1 so p ac 2. In br to	EB5003) produced diversified electricities, and switches, but product laced on reconstruction work. Though were laborers engaged in encordance with plans entirely differ January 1955, the old factory crick wall about 2.3 meters high. You will labout 20 x 40 meters, were about 20 x 40 meters, were district walls and red tile roofs and were being reroofed. In March and were surrounded by a wooden feather than the surrounded by a wooden feather surrounded by a wooden feather than the	trical supplies such as insulators, ion was limited became antesis was he majority of the 2,500 workers emplaying and rebuilding the factory in ferent from the original factory plans.  compound was surrounded by a wood and A view of the compound was blocked ruction outside the area. The buildings approximately 10 meters high, and had. They were surrounded by scaffolding 1955, the buildings had gray tile roofs	
(1) so post of the control of the co	EB5003) produced diversified electricities, and switches, but product laced on reconstruction work. Though were laborers engaged in enterodance with plans entirely differ January 1955, the old factory crick wall about 2.3 meters high. We will about 2.3 meters high. We will about 20 x 40 meters, were defined about 20 x 40 meters, were defined were being reroofed. In March and were surrounded by a wooden fer January 1955, two-family, Japan cofs were being constructed at EB	trical supplies such as insulators, ion was limited became and as is was he majority of the 2,500 workers emplarging and rebuilding the factory in ferent from the original factory plans.  compound was surrounded by a wood and A view of the compound was blocked ruction outside the area. The buildings approximately 10 meters high, and had a They were surrounded by scaffolding 1955, the buildings had gray tile roofs nee 1.5 meters high.  esse-style concrete buildings with tile 4804 for living quarters of factory	
(1) so po po ac 2. In bo re au an 3. In re er we	EB5003) produced diversified electricities, and switches, but product laced on reconstruction work. Though were laborers engaged in encordance with plans entirely differ January 1955, the old factory crick wall about 2.3 meters high. We have large buildings under constructed about 20 x 40 meters, were brick walls and red tile roofs and were being reroofed. In March and were surrounded by a wooden fer January 1955, two-family, Japan cofs were being constructed at EB approximately 80% completed.	trical supplies such as insulators, ion was limited became and as is was he majority of the 2,500 workers emplarging and rebuilding the factory in ferent from the original factory plans.  compound was surrounded by a wood and A view of the compound was blocked ruction outside the area. The buildings approximately 10 meters high, and had a They were surrounded by scaffolding 1955, the buildings had gray tile roofs nee 1.5 meters high.  esse-style concrete buildings with tile 4804 for living quarters of factory less than one kilometer from the factory, Many workers had their own homes hear the	
2. In bit of the second	EB5003) produced diversified electricities, and switches, but product laced on reconstruction work. Thoyed were laborers engaged in enterodance with plans entirely differ January 1955, the old factory crick wall about 2.3 meters high. You wo large buildings under constructed about 20 x 40 meters, were described were being reroofed. In March and were surrounded by a wooden fer January 1955, two-family, Japan cofs were being constructed at Employees. This housing project, as approximately 80% completed. In actory and did not have to rely or	trical supplies such as insulators, ion was limited became emples was the majority of the 2,500 workers empleaging and rebuilding the factory in ferent from the original factory plans.  compound was surrounded by a wood and A view of the compound was blocked ruction outside the area. The buildings approximately 10 meters high, and had. They were surrounded by scaffolding 1955, the buildings had gray tile roofs nee 1.5 meters high.  esse-style concrete buildings with tile 4804 for living quarters of factory less than one kilometer from the factory, Many workers had their own homes hear the in this housing.	
2. In bit of the second	EB5003) produced diversified electricities, and switches, but product laced on reconstruction work. Though were laborers engaged in enterodance with plans entirely differ a January 1955, the old factory crick wall about 2.3 meters high. You would be suited about 20 x 40 meters, were do brick walls and red tile roofs and were being reroofed. In March and were surrounded by a wooden fer a January 1955, two-family, Japan cofs were being constructed at Employees. This housing project, as approximately 80% completed. In actory and did not have to rely out of the end of the war, the Crick was approximately for the end of the war, the Crick was approximately as a per the constructed at the crick was about 20 x 40 meters, as approximately 80% completed.	trical supplies such as insulators, ion was limited became and six was he majority of the 2,500 workers emplaying and rebuilding the factory in ferent from the original factory plans.  compound was surrounded by a wood and A view of the compound was blocked ruction outside the area. The buildings approximately 10 meters high, and had They were surrounded by scaffolding 1955, the buildings had gray tile roofs nee 1.5 meters high.  esse-style concrete buildings with tile 4804 for living quarters of factory less than one kilometer from the factory, Many workers had their own homes hear the in this housing.	
(1) so post of the control of the co	EB5003) produced diversified electricities, and switches, but product laced on reconstruction work. Though were laborers engaged in enterodance with plans entirely differ a January 1955, the old factory crick wall about 2.3 meters high. We will about 20 x 40 meters, were described about 20 x 40 meters, were described about 20 x 40 meters, were described were being reroofed. In March and were surrounded by a wooden fer a January 1955, two-family, Japan cofs were being constructed at Employees. This housing project, as approximately 80% completed. In factory and did not have to rely our for to the end of the war, the Com Hak Kyo) (2612/0044//2814/147 arch 1955, this school had been research work of the second had been research work of the seco	trical supplies such as insulators, ion was limited became and six was he majority of the 2,500 workers emplarging and rebuilding the factory in ferent from the original factory plans.  compound was surrounded by a wood and A view of the compound was blocked ruction outside the area. The buildings approximately 10 meters high, and had a They were surrounded by scaffolding 1955, the buildings had gray tile roofs nee 1.5 meters high.  esse-style concrete buildings with tile 4804 for living quarters of factory less than one kilometer from the factory, Many workers had their own homes hear the n this housing.  huul Ceramics College (Chuul Yo Op Chon 5, 124/1334/1659) was near the factory. In seased the Chuul Follege of Electricity	25X^
(1) so post of the control of the co	EB5003) produced diversified electricities, and switches, but product laced on reconstruction work.
